Chapter 1
In Which we Attempt a List in a Figure

I am trying to create a floating figure that contains a list in which the items may span several lines, but am having trouble because when I try this the items don't "wrap". This is with TeXmacs 1.0.7.3 running on Ubuntu 10.04.

Here, I create the figure –> <–, known as Figure 1.1. Note the problem reading all of Step 3.

1a. Create a figure with Insert->Page Insertion->Floating figure
1b. Label and caption the figure, just because I always do that
2a. Create the list with the "Aligned" style
2b. Other styles may demonstrate the problem; I've not checked
2c. I'm using aligned because I happen to want slighly strange numbering
3. Enter some really really long text, to demonstrate that it goes off into the margin rather than wrapping ea
4. Create a simplified copy just giving these instructions, to veryify the problem
5. Get help from TeXmacs-users mailing list.

Figure 1.1. The long-item list in a figure.

Here is a copy of the content of the figure, which line-wraps just fine:

1a. Create a figure with Insert->Page Insertion->Floating figure

1b. Label and caption the figure, just because I always do that

2a. Create the list with the "Aligned" style

2b. Other styles may demonstrate the problem; I've not checked

2c. I'm using aligned because I happen to want slighly strange numbering

3. Enter some really really long text, to demonstrate that it goes off into the margin rather than wrapping each line as I wanted it to.

4. Create a simplified copy just giving these instructions, to veryify the problem

5. Get help from TeXmacs-users mailing list.
