

if i copy-to-verbatim/paste-from-latex this code :

```
\begin{enumerate}
  \item[(2.a)] question 2.a
  \item[(2.b)] question 2.b
\end{enumerate}
```

i get nice numbered items that i would like to create with some `\item[something]` instruction :

(2.a). question 2a

(2.b). question 2b ~→ if then i press ↵ i get number 1 :

1. question 4... ~→ if i want again some « (a) » item, i try this : `\item[(a)]`

but it doesn't work ; it gives : `\item[(a)]`
